Conformity Statement

Over the past several years many companies sought and achieved certification or registration of one of the BS 5750 / ISO 9000 / ISO 9001 series of standards. Other companies have wished to become ISO 9000 / 9001 certified but have been unable to afford the costs or have been unwilling to comply with some of the requirements of the ISO 9001 registrar or auditors. A possible solution is for a company to simply comply with the ISO 9001 standards but not complete the registration process. Some time ago at a meeting of the directors / shareholders of Leeds Transformer Company Limited, it was decided to adopt this latter method, of conforming to the current ISO 9001 standard, without completing the registration process.
